Without focus on our food, our brain doesn't get the right amount of energy and building bricks to work properly. Our brain is also dependant on our heart and blood vessels for supporting it with blood and those building bricks. If we don't connect with our body, the body will start to protest sooner or later. All that protest gets to your brain as signals of distress. Your brain won't function correctly if you don't take care of your body properly. If you (healthily) focus on your body first, your brain will function way better.</p>
